

NEW PRODUCT IN THE QCHAIN ECOSYSTEM

5+ bln people use various messengers. Unfortunately, none of them can boast of 100% protection against hacking and information leaks.

We are working at it and will soon present you a new messenger - Qchat.

- Advanced functions
- Calls and messaging
- Token integration
- Simple and convenient functions

Qchat will make communication safer and easier!

The world's first online lottery running on the blockchain technology and featuring an unlimited scaling system!

- 100% fair game
- No deductions or fees
- No human factor
- Instant wins
- Anonymity of the players
- Availability of free tickets
- 2,000,000+ winning tickets
- Affiliate programs
 - 10% from the tickets bought by referrals through 3 tiers

We are getting with the times and integrate the most advanced technology into the lottery segment of the market to provide our users with the best and most comfortable conditions for pleasant leisure and building their own network of branches all over the world!

QDEX DECENTRALIZED EXCHANGE

QDEX is a decentralized platform running on the Qchain blockchain.

There is a special QDEX tab in the Qchain node. When users click on it, they get instant access to the DEX capabilities.

- Trade without intermediaries
- Your keys, your funds
- Complete asset security
- Instant exchanges
- Anonymous conversion of cryptocurrencies

QCHAIN

Crypto ecosystems with new generation core

WELCOME TO THE FUTURE

QFIGHT

QFIGHT PROMOTION COMPANY

Mixed martial arts are more popular than some other sports today. Fans are looking forward to new pictures and closely monitor the fighters' ratings.

We are pleased to announce the creation of our own fighting promotion QFight, where you can see lots of spectacular and unpredictable fights for the belt over time.

The promotion will be closely linked to the Qchain ecosystem.

Besides, we have introduced a range of innovations, which can help you not only watch the live fights, but also feel as in that atmosphere, being a second in the fighter's corner.

The modules and smart contracts have already been developed to date. The platform is undergoing full-scale testing, and the following results have been achieved:

+1000000
Transactions per second

QChain - is a full-fledged blockchain platform able to operate privately and publicly for the state, commercial, and private activities.

The platform can be used both with thin clients and more powerful processors, base stations, as well as with the latest electronic and computer technology, including quantum computers.

Qchain has a well-developed system of smart contracts.

The capabilities of smart contracts allow creating a four-dimensional chain of blocks instead of one-dimensional. In practice, this allows concluding a deal among several participants at once (up to 10 transactions), which significantly expands the scope of this network.

Qchain allows users validating transactions in other cryptocurrency networks such as Bitcoin, Ethereum, Lifecoin, Dogecoin, etc.

The Qchain platform network has its own SDK for any platform based on dynamic libraries, as well as API and samples for various programming languages.

QCHAIN WILL BECOME AN INNOVATION IN THE BLOCKCHAIN PLATFORM INDUSTRY, which will exceed all the existing achievements in the formation speed, storage security, and the encrypted data sending and receiving.

TOKENOMICS

QDTs are tokens expressing the property right to intellectual property (IP) of the Qchain program code, issued in the amount of

2,718,281,828 QDT

Due to the high network bandwidth, all transactions with tokens and fiat money are executed as quickly as possible.

An independent decentralized exchange QDex has been built on the blockchain. Users can buy, sell, and exchange popular cryptocurrencies, while the fees for transactions will be the lowest.

EARNING OPPORTUNITIES

1. STAKING

If you fix more than 100,000 QDT to keep the network running, you receive dividends of up to 50% from all transactions in the Qchain network

2. TRADING

Income from the token value appreciation. As the network grows and tokens are burned (section "Tokenomics 5.0"), the value of the token grows to secure a profit

3. SPARE SPACE RENTAL

Renting out the unused disk space. A user who rents their unused hard drive megabytes to others receives up to 30% of the price of this service

4. WRAPPED TOKENS

Users earn a small percentage from profits derived from operations with wrapped tokens on the stock exchange for participation in the liquidity pool

5. QTI INDEX

Opportunity to earn additional income from the use of the QTI index

THE QCHAIN TASK IS

to unite useful and interesting platforms into a single ecosystem with a flexible and transparent economy.

This can create a community around a whole range of digital, travel, financial, physical goods, and services.

Some platforms have already expressed interest in maintaining and implementing the Qchain network in terms of payment methods, as well as interaction with customers and users.
